DETAILED ACTION

Allowable Subject Matter

1. Claims 1-15 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. Applicant argues that Watanabe does not teach between 25 and 65 atomic percent. The Examiner agrees, Watanabe is unclear as to what the percentage denotes because no definition is given to the percentage in the reference. Therefore, the percentages can not be considered atomic percentages of oxygen in the layers. In addition, Watanabe (US 4776894, JP 63120476) teaches thicknesses of about 10nm (Table 1) which fails to meet the requirements of claim 1, 20-120nm. Yamagish (US 4926230) teaches that the thickness of the composite layer is between 1 and 30 nm however Yamagishi teaches atomic percentage of oxygen of up to 10%. From the references it is apparent that the prior art teaches either thicker layers with less atomic percentage oxygen or thinner layers with increased oxygen concentration such that both a thicker layer and higher atomic percentage of oxygen would not have been obvious to one of ordinary skill in the art at the of the invention. In addition, Yamagishi nor Watanabe are concerned with internal reflective layers. Moreover, Applicant argues unexpected results as a result of increased oxygen atomic percent in an amorphous silicon composite layer increasing internal reflection (Instant disclosure: pages 14-15, Table 7). Further search did not identify more closely related art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 1795

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
